Chronic Conditions & Treatment Patterns Analysis

- Exploring patient demographics, chronic disease prevalence and prescription patterns;
- Insights into multimorbidity and treatment intensity.

Key Metrics Overview

Summary of patient population, chronic conditions and treatment patterns.

1171
Total Patients

292
Patients With Chronic

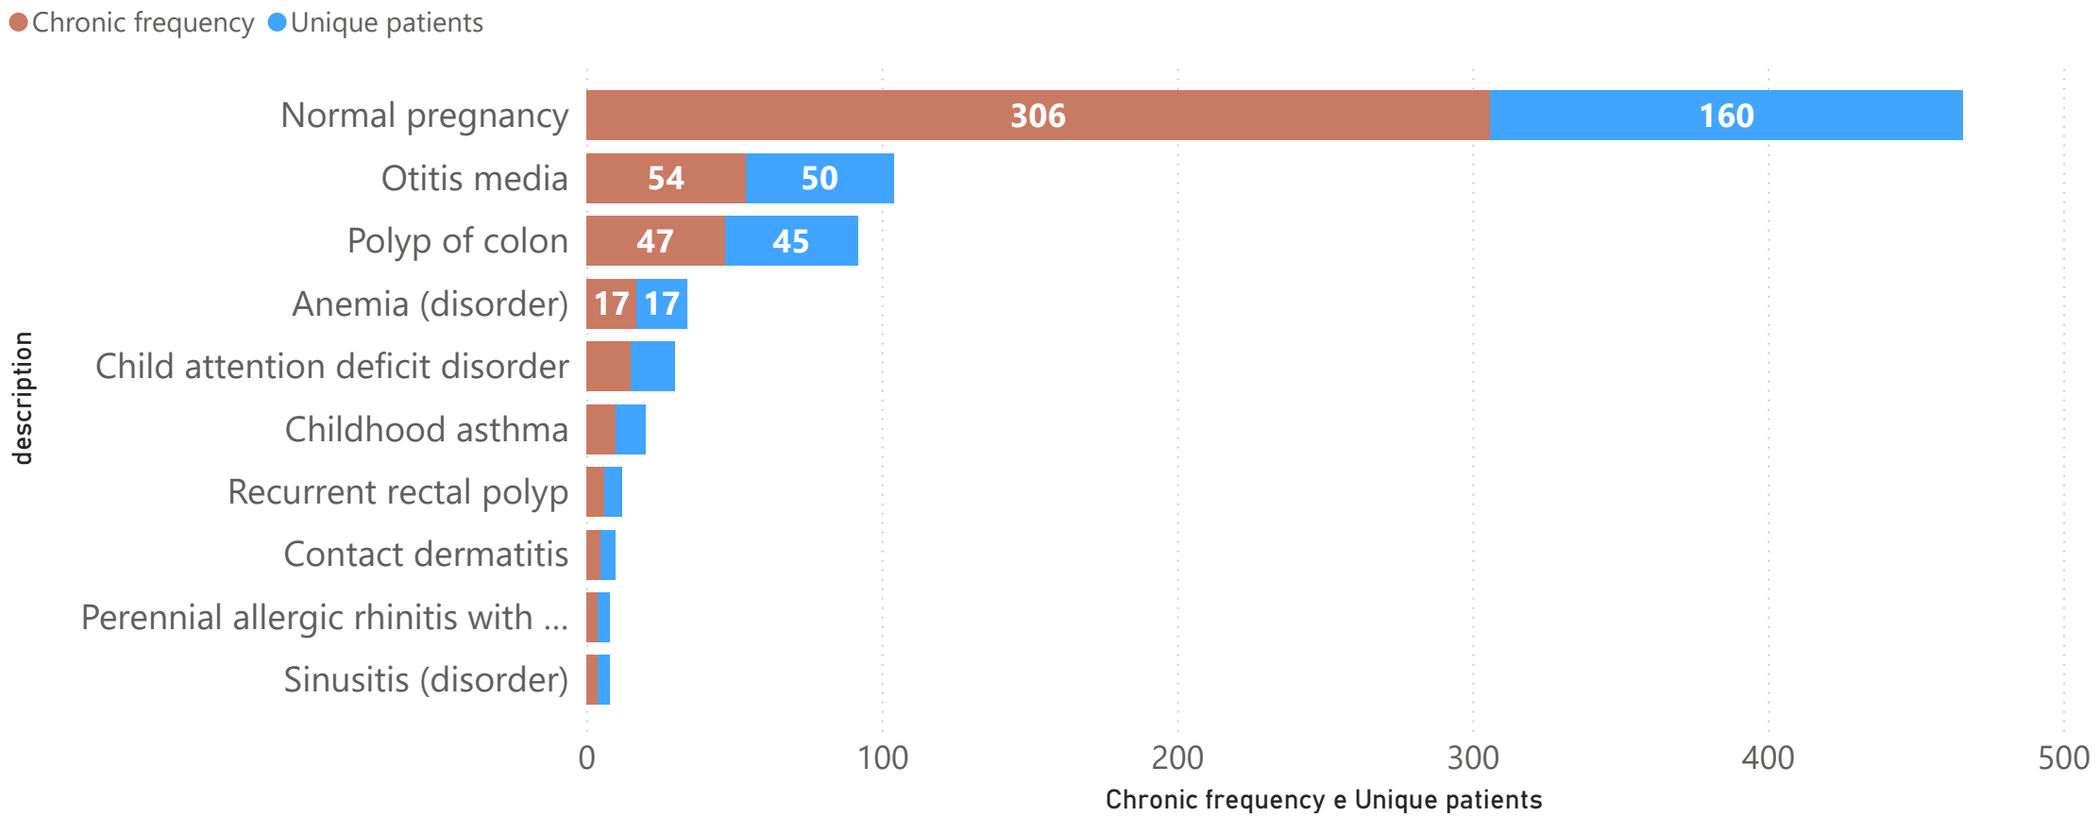
531
Total Prescriptions

40,41%
Multimorbity Rate Final

0,45
Avg Prescriptions per Patient

Chronic Conditions

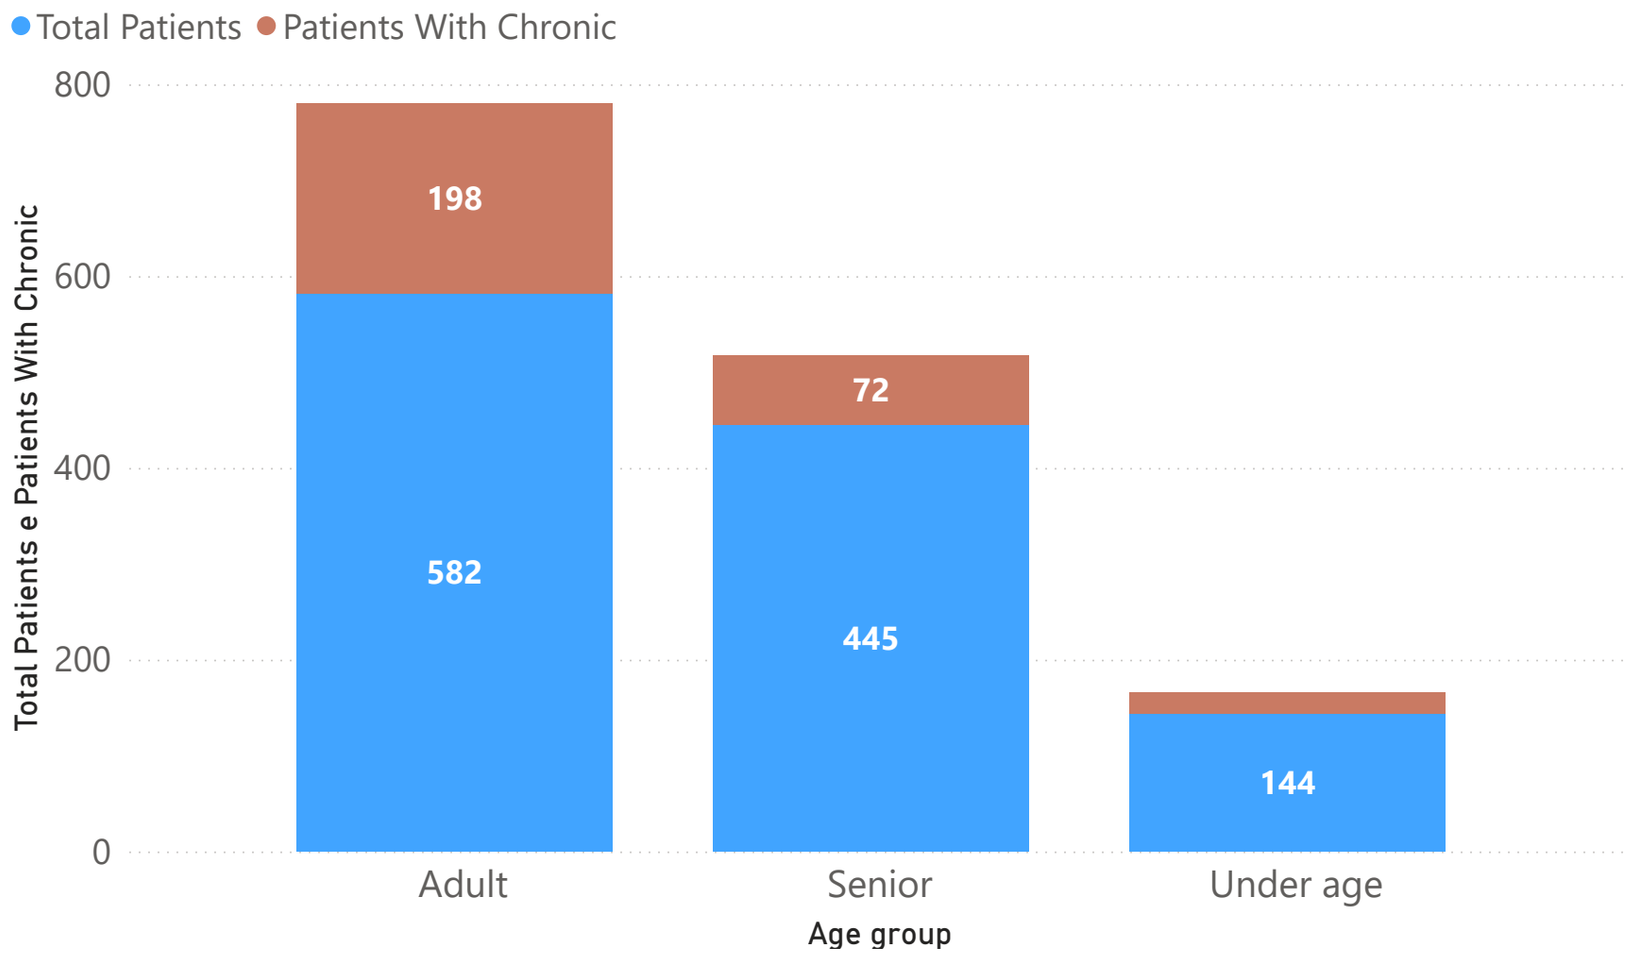
Most frequent conditions classified as chronic based on durations (=> 180 days).



"Normal pregnancy" appears as a chronic condition due to the duration-based definition, highlighting a limitation in the classification methodology.

Patients Demographics

Distribution of patients and chronic conditions across age groups.

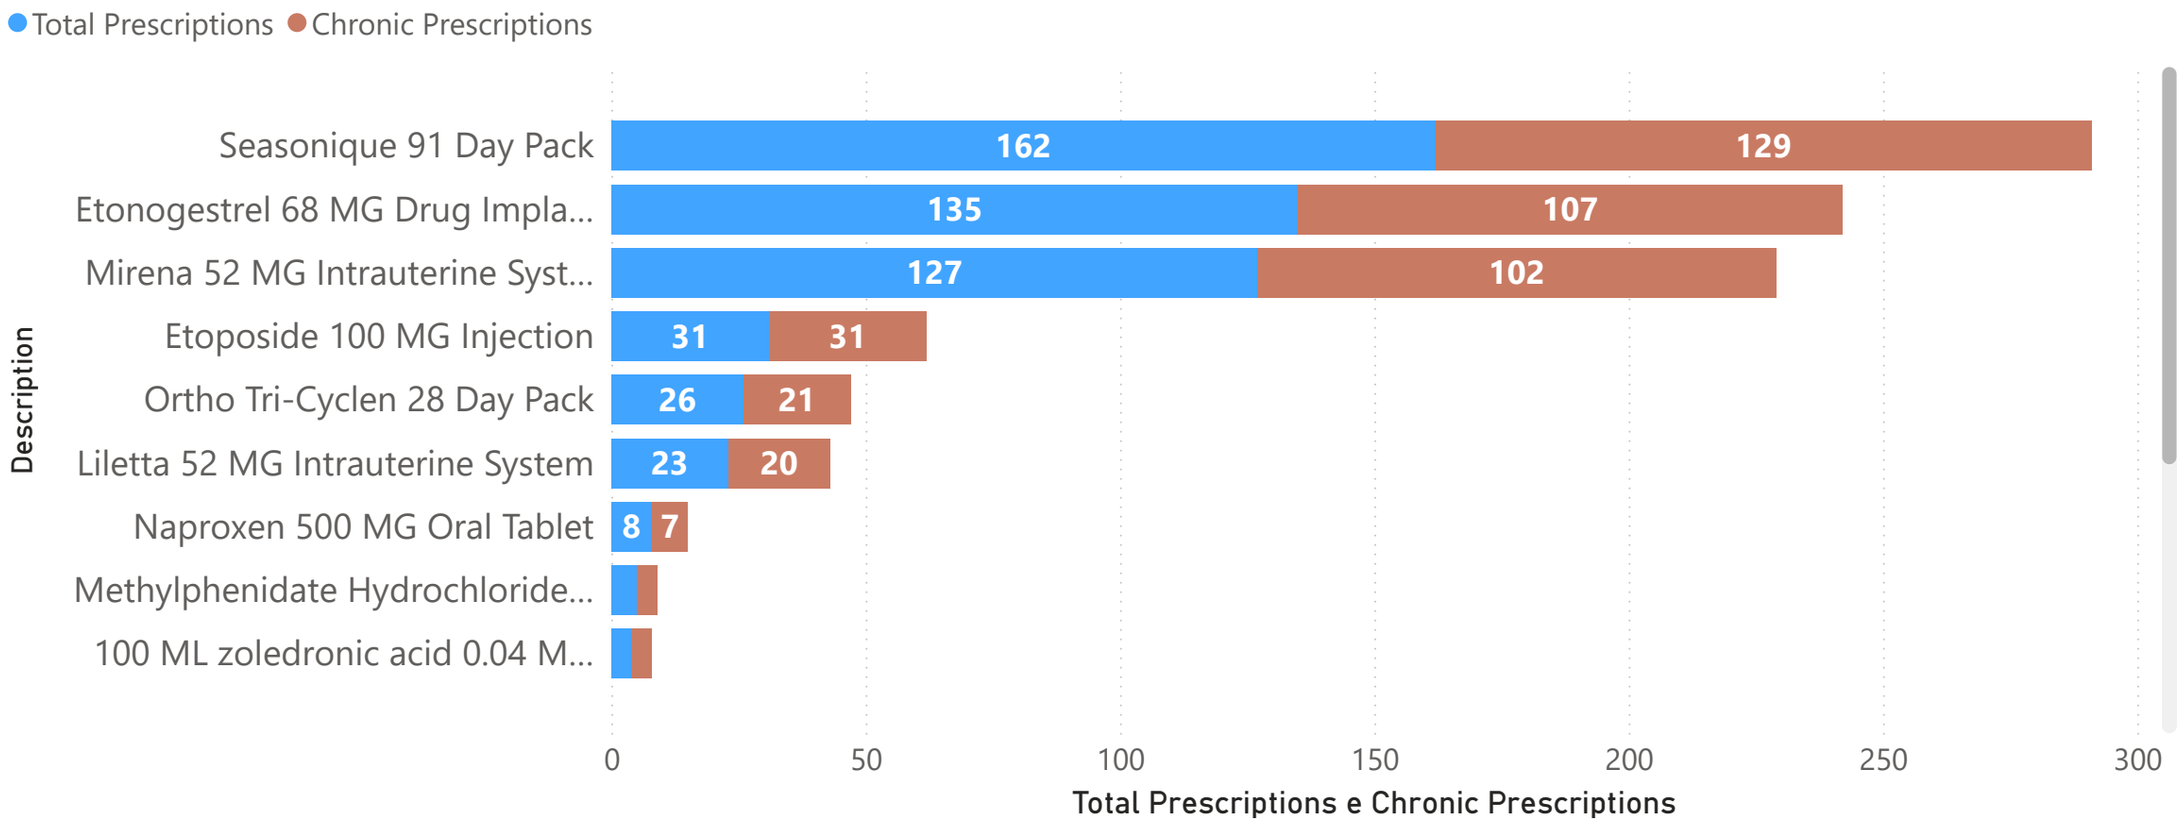


- *Adults show the highets proportion of chronic conditions.*
- *This unexpected result may be influenced by the duration-based definition, which includes non-chronic conditions such as pregnancy.*

Age groups:
Under Age: < 18
Adult: 18-59
Senior 60+

Prescription Insights

Analysis of prescription volume and their association with chronic conditions.



While high-volume medications dominate chronic prescriptions, their relative association with chronic conditions varies, highlighting the importance of evaluating both volume and proportion.
